DETAILED ACTION

Response to Arguments

1. Applicant's arguments, filed 12/7/07, with respect to the objection to the claims and rejection of the claims have been fully considered and are persuasive. The objection/rejection has been withdrawn.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, rotating the magnetization direction in three first steps for writing logic "0" (see claims 1 and 4) must be shown or the feature(s) canceled from the claim(s). **Note: Fig. 3a-3h only shows the rotation steps necessary to write a logic "1" and not a logic "0".** No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for

consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

3. Claims 1, 2, and 4-7 are allowed. The following is an examiner's statement of reasons for allowance: the prior art of record considered pertinent to the Applicant's disclosure, whether taken individually or in combination, does not teach or suggest: controlling the timings of impressing the word line current and bit line current to be offset to one another by a switching duration of the word line current for rotating the magnetization direction of the soft magnetic layer in three successful angular displacement steps; wherein for writing a logic "0" the magnetization direction is rotated in three first steps in a first angular direction, and for writing a logic "1" the magnetization direction is rotated in three second steps in a second inverse direction (see claims 1 and 4)

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
